DATE OF INFO  2. In January 1952 a series of explosions occurred in the Witkovice Ironworks, which is producing equipment for the new iron and steel manufacturing complex at functoe (551/660).* Following the explosions Vitkovice Plant Manager (sic) Ing. Janicek was arrested on a churge of sabotage.  The Cache have ordered rolling mill, plate cutting steers capable of handling 70-mm high alloy 50X1-HUM steel, and rolling shears 12 m long. No deliveries have been made to of the six furnaces designated for construction in the area, only two have been built.** The construction of the remaining four is unlikely. Construction plans for this area capable of bandling for its unlikely. Construction plans for this area we changed because Soviet advisers designated for construction in the area, only two have been built.** The construction of the remaining four is unlikely. Construction plans for this area were changed because Soviet advisers designated for construction in the area, only two have been built.** The construction of the remaining four is unlikely. Construction plans for this area were changed because Soviet advisers designated for construction in the area, only two have been built.** The construction of the remaining four is unlikely. Construction plans for this area were changed because Soviet advisers designated for construction in the area, only two have been built.** The construction of the remaining four is unlikely. Construction plans for this area were changed because Soviet advisers designed by Vitkovice was installed (Comment: This is probably in an area fairly open to aerial bombing and possibly to Western ground attack. The Russians favor the more remote center of Kostee in Eastern Stovakia, where the HUKO steel mill is under construction of the plant50X1-HUM the Klement Cottwald Ironworks, known as "Little Donbas", which has been under construction of infeate the planned congaraction of three blast furnaces. The Czechs have ordered rolling shears capable of handling 70-mm high alloy 50X1-HUN steel, and rolling shears 12 m long. No deliveries have been made to the present time, and no other items have been ordered plant. The development of the Kuncice complex appears to have been halted. Of the six furnaces designated for construction in the area, only two have been built.** The construction of the remaining four is unlikely. Construction plans for this area were changed because Soviet advisers deemed it inadvisable to concentrate the Czech iron and steel industry in an area fairly open to aerial bombing and possibly to Western ground attack. The Russians favor the more remote center of Kosice in Lastern Slovakia, where the HUKO steel mill is under construction.  **  Comment: Similar explosions occurred in Poland after machinery 50X1-HUN produced by Vitkovice was installed (				50X1-HUM
